

How Print Boosts Digital Campaign Performance

When it comes to print, neuroscience has shown that we use different parts of the brain to process information that we can both see and feel. This deeper level of engagement is why paper-based reading is associated with stronger transfer to long-term memory, recall and comprehension.

Print and digital both reflect considerable reading times with strong engagement. Research conducted over a span of eight years strongly supports how print boosts digital performance across several key attributes.

This added depth of engagement is why print consistently achieves the highest levels of brand favorability and purchase intent of any measured media.

Average Brand Lift Due to Exposure

Brand Awareness

Brand Favorability

Brand Purchase Intent

According to The Online Marketing Institute, it takes seven to thirteen touches to deliver a qualified sales lead. A varied mix of media, including print, is needed to move prospects from familiarity to preference and ultimately, to action.
